

New Customer Onboarding Guide (First 90 Days)

TelNova Communications • Internal Policy Document • RET-POL-023 • Version 3.2 • Effective 01 March 2026 •
Owner: Customer Retention Operations

1. Purpose

The first 90 days of a subscription are the highest-risk churn window. This guide defines the onboarding journey that every new residential customer must receive, and the checkpoints owned by the retention team.

2. Onboarding Timeline

Checkpoint	When	Channel	Owner	Goal
Welcome message	Day 0 (activation)	SMS + Email	Automated	Confirm activation, share support contacts
Setup check	Day 3	Email	Automated	Verify equipment and service working
First-bill preview	Day 25	Email	Billing	Explain first invoice, avoid bill shock
30-day wellness call	Day 30	Phone	Retention team	Detect early dissatisfaction
Usage review	Day 60	Email	Automated	Recommend plan fit based on usage
90-day milestone	Day 90	Email + CRM flag	Retention team	Exit onboarding, set churn-risk baseline

3. First-Bill Shock Prevention

First-invoice disputes are the single largest driver of cancellations inside the first 90 days. The first invoice frequently includes prorated charges and one-time installation fees, and agents must proactively explain these. If a new customer disputes their first bill, agents may waive one one-time fee up to 25 EUR without approval. This waiver is an onboarding remedy, not a retention discount, and is therefore not subject to RET-POL-021 limits, but it may be used once per account.

4. The 30-Day Wellness Call

The wellness call is mandatory for customers on month-to-month contracts and for any customer whose setup-check email bounced or went unanswered. The call script covers: service satisfaction (1-10 scale), equipment issues, billing clarity, and awareness of the support channels. A satisfaction score of 6 or below triggers an automatic Severity 3 case and a follow-up call within 7 days, per the Escalation Procedure (RET-POL-022).

5. Early Cancellation Requests

Customers requesting cancellation within the first 30 days fall under the statutory cooling-off rules and must be transferred to the specialized Early-Life team; standard retention discounts do not apply in this window. Between day 31 and day 90, cancellation requests follow the normal escalation path but agents should prioritize root-cause fixes (equipment swap, plan change, fee waiver) over discounts,

which show poor save rates in the early-life segment.

6. Handover to Steady-State

At day 90 the account exits onboarding. The retention team records a churn-risk baseline using the analytics model score, satisfaction score from the wellness call, and any open cases. Accounts scoring in the top risk quintile enter the proactive outreach program described in RET-POL-025.
