

Former Customer Win-Back Procedure

TelNova Communications • Internal Policy Document • RET-POL-019 • Version 3.2 • Effective 01 March 2026 •
Owner: Customer Retention Operations

1. Purpose and Scope

This procedure governs outreach to former residential customers whose service has been fully disconnected. It complements the Retention Discount Policy (RET-POL-021), which covers customers with active service only.

2. Win-Back Eligibility Windows

Time Since Disconnection	Eligible for Outreach	Permitted Offer
0 - 30 days	Yes - priority queue	Reactivation with waived reconnection fee
31 - 180 days	Yes - standard queue	Win-back rate: up to 20% below standard MRC for 6 months
181 - 365 days	Yes - campaign only	New-customer promotional pricing
Over 365 days	Treated as new customer	Standard acquisition offers only

3. Exclusions

Win-back outreach must not target: accounts disconnected for non-payment with an outstanding balance; accounts closed following a fraud investigation; customers who have opted out of marketing contact; or customers who ported to another provider fewer than 14 days ago (statutory quiet period). Accounts disconnected for non-payment become eligible only after the balance is settled in full.

4. Outreach Rules

A former customer may receive at most three win-back contacts per eligibility window: one call, one email, and one SMS. A stated 'no' at any point closes the window immediately and suppresses the account from campaigns for 6 months. All contacts are logged under case category WINBACK in the CRM.

5. Reconnection Mechanics

Reactivations inside 30 days restore the previous account number, plan, and equipment where possible, and the reconnection fee of 35 EUR is waived automatically. Reactivations after 30 days are provisioned as new installations: a new account number is issued, a technician visit may be required, and prior loyalty tenure does not carry over except for customers with more than 5 years of prior tenure, whose tenure is restored upon request approval by the Retention Operations Manager.

6. Measurement

The win-back program is measured on reactivation rate per window, 180-day survival of reactivated accounts, and cost per reactivation. Results are reviewed monthly alongside the retention discount KPIs defined in RET-POL-021.
